# WebDefence for Mobile

DwebConsults Solutions WebDefence is our IT Security solution that provides all round cyber security protection and management to clients' mobile devices. With WebDefence for Mobile, your mobile device protection and management is in our care.

# Features of WebDefence for Mobile

- Detailed security setup on business owned devices.
- Tracking location of lost or stolen mobile devices using the built-in GPS.
- Data usage monitoring and control on devices.
- Remote locking or wiping of phone if stolen or lost.
- Support for wide range of mobile operating systems such as iOS, Android and Windows.

# Summary and Pricing

WebDefence for Mobile is a powerful tool that is a must for security conscious individuals and organisations and when combined with other WebDefence products would have created an enterprise level security solution in place for security sensitive organisations.

We know that each individuals and organisations have different security requirements, that is why we use custom based pricing plan to better suit the budget of clients.
