# WebDefence for Workstation/Desktop

DwebConsults Solutions WebDefence is our RMM tool that monitors and provides all round managed cyber security protection to client's workstation. With WebDefence for Workstation, we lift the burden of system security from off the shoulders of our clients so they can focus on other things while they let the experts take care of security issues.

# General Overview

- Backup and Recovery : with the backup and recovery add-on clients do not need to worry about losing of important data from a system crash. As WebDefence will do a complete disaster recovery so you don't lose anything from a crashed system.
- Endpoint Detection and Response: with endpoint detection and response add-on, client cyber security is pushed beyond just what regular antivirus can handle. Comes with deeper forensic analysis, AI based and machine learning threat detection, prevention and remediation that is 24/7 actively protecting the system whether online or offline without the need for signature updates like conventional antivirus.
- Advanced protection from evolving and latest cyber attacks such as ransomware, zero-day attacks e.t.c with capacity to do a emergency roll back of compromised files.
- Use traditional signature-based Anti-virus management to block known threats and malwares.
- Organisational Work Browsing Policies setup for employees such as which websites can be visited during working hour and which cannot be visited, blocking of known malicious websites from being visited and so on.

# Highlights

- Near real-time file analysis: The system can analyze files continuously, replacing time-intensive recurring scans.
- Signatureless: Fight back against the latest threats without having to wait for daily definition updates as in conventional anti-virus.
- Offline protection: Artificial intelligence data is stored on the workstation making sure it's protected even while offline.
- Machine learning: With machine learning the system determines how best to respond to threats and adjusts those responses over time.
- Autonomous action: Attacks are automatically contained and neutralized, and compromised files are automatically replaced by the last known healthy version (Windows OS only).
- Patch and update management: managing of security patches and update for Operating system, core softwares and some thirdparty softwares.

# Summary and Pricing

WebDefence for Workstation is a powerful tool that is a must for security conscious individuals and organisations and when combined with other WebDefence products would have created an enterprise level security solution in place for security sensitive organisations.

We know that each individuals and organisations have different security requirements that is why we use custom based pricing plan to better suit the budget of clients.
